DMXETHERGATE Mk2

Having problems distributing DMX?

Look no further, the **DMXEtherGate Mk2** is the DMX distributing system solution. Sending DMX over ethernet brings you many advantages: low cost cabling, wireless links, unlimited remote softpatch and multiple universes on the same wire.

By using the **DMXEtherGate Mk2**, you can solve all your DMX512 distribution problems without breaking your budget.

This new **DMXEtherGate** has 2 output or input ports, supports multiple protocols and is configured using any web browser thanks to the built-in web page.

Hardware:

- The **DMXEtherGate Mk2** hardware fits into a robust metal 9.5 inch 1 Unit rack
- Two can be mounted side by side to form a standard 19 inch rack
- The **DMXEtherGate Mk2** has 4 connectors: two DMX512 IN or OUT depending on the model, RJ45 and IEC power connector.
- The **DMXEtherGate Mk2** has an internal mains power supply that will accept any input voltage from 96 to 264V AC

Applications:

- Wireless DMX
- Multiple universe merging
- EVO DMX output
- ARTNET Output from any lighting desk

Features:

- **Dual DMX Output or Input**
- **ARTNET Compatible**
- Up to 256 DMX512 universes on a 10Base-T Ethernet link
- Remote configuration (configure your whole DMX512 network from one location) using standard web browser
- Node Universe Binding (have multiple nodes each assigned to their own DMX universe)
