DMXPLAYBACKREMOTE

The **DMXPlayBackRemote** is an add-on for: DMXPlayBack or DMXStreamer. It acts as a remote control to start one of the twelve shows stored in memory.

The remote is connected to the DMXPlayBack using a single DB9 cable, no power supply is needed, this cable can be up to 5 metres long.

Many uses

You could use the DMXPlayBack and the remote for:

- Shop fronts: program the required number of shows and let the shop owner run what he wants.
- Bars: let the bar man change the "mood" (light show) when he wants without having to fiddle with a console.

Fool-proof interface

The **DMXPlayBackRemote** is a fool-proof interface to the DMXPlayBack or DMXStreamer. You can label each switch for added simplicity. There are no settings to change, just press the button and the show starts. Pressing another button will stop the current show and start the selected one, it's that easy!

Applications

- Trade shows
- Conference rooms
- Shopping centre
- Shop front
- Bars/ Night clubs
- Conference room

Hardware:

- 7 soft keys with LED indicator
